PIONEER PRODUCT DESCRIPTION FOR PIONEER FINANCE DATA SUITE, FINANCE OPEN INTEGRATION FRAMEWORK

ABOUT THIS DOCUMENT

This document describes the key features in Pioneer Finance Data Suite, Finance Open Integration Framework and relevant usage rights.

The availability of some of these features may depend on your license agreement with Pioneer. To illustrate the integration with other Pioneer or SAP offerings, the product documentation might include references to features that are not included with Finance Data Suite, Pioneer Finance Open Integration Framework. Features that are not included in this Pioneer product description might require a separate license.

Description

The Finance Open Integration Framework is a comprehensive solution designed to facilitate seamless financial data integration, transformation, and reporting within an SAP S/4HANA environment. This framework provides essential tools and capabilities to ensure efficient data processing, high data quality, and robust data governance, making it an integral part of modern financial operations.

General Information on License Metric

The following overview outlines the usage rights for operating the **Pioneer Finance Data Suite**, including the **Finance Open Integration Framework**, across different licensing options. The Finance Open Integration Framework, as a key component of the Finance Data Suite, enables users to manage and extend reporting capabilities effectively. The main distinction between these licensing metrics is the number of used business solutions (standard, custom-developed, third-party).

License option:

- **Foundation:**
Includes unlimited Pioneer Standard Business Solutions and covers up to 6 active customer-developed solutions and six active third-party solutions.

Additional solutions can be added in increments via:

- **Extension: Customer Scenario Package:** Adds 6 active customer-developed solutions.
- **Extension: 3rd Party Scenario Package:** Adds 6 active third-party solutions.

Additionally, the **Pioneer Finance Data Suite** includes the **Finance Consumption Layer** and **Data Quality** components. These elements are integral parts of the suite and can be subscribed to individually or as part of an overall bundle, offering flexibility based on organizational needs.

It should be noted that for the use of the **Data Quality** component Finance Open Integration Framework or Finance Consumption Layer is a prerequisite.

Key Features and License Solution Information

Solution: Pioneer Finance Data Suite, Finance Open Integration Framework Metric: Total Assets for banking option, Premiums for insurance option Measurement: Customer Annual Statement	
Key Feature	Use
ETL Orchestration	• Robust ETL (Extract, Transform, Load) orchestration tightly integrated with SAP S/4HANA for mass data integration • Manage complex data flows, ensuring accurate data reading, transformation, and loading. • Features include error handling, process monitoring, and complex data transformation logic. • Maintains data integrity and operational efficiency across financial systems.
Rules Engine	• Handles complex business logic and data transformation rules. • Supports a wide variety of transformations: conditional logic, data aggregation, complex calculations. • Facilitates standard business transformations ensuring consistency and compliance. • Adapts to changing regulatory requirements and internal policies.
Data Lineage	• Provides transparency and traceability of data from source to destination as export for external data lineage solutions • Essential for auditability and regulatory compliance with detailed insights. • Automatically captures and documents data transformations at entity and field level. • Supports external reporting requirements with clear data lineage.
Integration with External Systems	• Seamless integration with third-party financial applications and regulatory tools. • Standardized interfaces support diverse data formats and protocols. • Handles complexities of interfacing with diverse systems: data mapping, protocol conversion, synchronization. • Reduces effort in connecting SAP S/4HANA with other financial systems.
Automation of Documentation	• Automates creation of ETL process and data transformation documentation. • Ensures consistent, up-to-date documentation aligned with actual processes. • Supports auditability and compliance with comprehensive records. • Reduces manual effort and enhances process transparency.
Financial Business Transformation	• Supports large-scale financial business transformations. • Models and executes complex business

Solution: Pioneer Finance Data Suite, Finance Open Integration Framework Metric: Total Assets for banking option, Premiums for insurance option Measurement: Customer Annual Statement	
Key Feature	Use
	transformations and adapts e.g. regulatory changes. • Modular approach allows incremental implementation, reducing risks. • Tools for monitoring and managing transformation impacts ensure minimal disruption.
Pre-defined Business Solutions	• Library of pre-defined solutions for common financial requirements (e.g. Regulatory Reporting, Risk). • Configurable and reusable for rapid deployment and efficiency. • Ensures consistency in financial operations and reduces errors. • Improves efficiency in reporting and compliance activities.
Metadata Management	• Comprehensive management of technical and business metadata. • Tools for defining, cataloging, and exporting metadata ensure data governance. • Supports compliance with regulatory requirements and efficient data integration. • Integrates with external tools, enhancing existing data governance infrastructures.

Product Availability

Finance Data Suite, Pioneer Finance Open Integration Framework is available in English.
